WHO is LockBit 3.0

LockBit ransomware is malicious software designed to block user access to computer systems in exchange for a ransom payment. LockBit will automatically vet for valuable targets, spread the infection, and encrypt all accessible computer systems on a network.

This ransomware is used for highly targeted attacks against enterprises and other organizations.

Mitigation Suggestions

Weekly Ransomware Group Activity Report

1

Provide regular training in order to raise awareness of cyber security among your employees,

2

Identify, prioritize and back up the asset that you need to protect at regular intervals and keep 3 different copies of the created backups in two different media types and one outside the institution,

3

Behave suspiciously against e-mails of unknown origin and the file attachments they contain, if possible, do not open them,

4

Use licensed and up-to-date operating systems,

5

Use reliable anti-virus solutions,

6

Block all IoC (Indicator of Compromise) findings in
this report by security devices.

How
Can We Help
You?

What We Are Doing?

Brandefense is the proactive digital risk protection solution for organizations.

Our AI-driven technology constantly scans the online world, including the dark, deep and surface web, to discover unknown events, automatically prioritize risks and deliver actionable intelligence you can use instantly to improve security.

Account Takeover Detection

Identify the account takeover incidents with botnet and email breach monitoring service.

Phishing Takedown Service

Identify the possible phishing domains with advanced rules and monitor them all.

Deepweb Monitoring

Cybercriminals are talking, sharing, and exploiting inside the dark web. Then monitor this place deeply.

Takedown the Threats

When Brandefense sends you an incident, know what you should do and takedown the threat quickly.
